

## SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

1.	The more containers that can be returned for deposit the better. Wine bottles particularly . but all glass and plastic drink bottles , cordial, milk . What about glass jars. Less contamination of other materials in recycling bins
2.	Any recycling is great and I hate putting glass into kerbside recycling. This is a fantastic idea, the more glass and plastic recycled is for the better. Having people receive cash for doing it makes it so much more successful. It's a YES from me.
3.	The amount of broken glass in kerb side recycling, which in turn contaminates the rest of the recycling load, leading it to going to land fill, anything we can do to minimise use of landfill the better.
4.	Strongly agree  In response to: The amount of broken glass in kerb side recycling, which in turn contaminates the rest of the recycling load, leading it to going to land fill, anything we can do to minimise use of landfill the better.
5.	Strongly agree  In response to: Any recycling is great and I hate putting glass into kerbside recycling. This is a fantastic idea, the more glass and plastic recycled is for the better. Having people receive cash for doing it makes it so much more successful. It's a YES from me.
6.	Strongly agree  In response to: The more containers that can be returned for deposit the better. Wine bottles particularly . but all glass and plastic drink bottles , cordial, milk . What about glass jars. Less contamination of other materials in recycling bins
7.	Expansion of the recycling program to include as many varieties of containers and packaging materials as possible and reduce landfill is really a no brainer. Improvements to also include making it easier to get electronic refunds or donate to charities would be significant additions to attract and encourage people to be participants in the scheme.
8.	The amount of wine drunk in SA we must have an expanded programme. Agree that it should include all the larger plastic containers.
9.	The more we can recycle the better, it all helps to turn waste into resource.As a kid the only thing we recycled was long neck beer bottles and Woodies lemon aid bottles, oh! and newspapers used to go to the local fish and chip shop or to the greengrocers. I cant recall products that were produced from recycled resources, now look at what is available, even our waste containers are made from recyclables, lets keep the momentum going.Education of the young to recycle helps immensely as well and can become second nature for future generations.
10.	Absolutely agree. The less to landfill the better. How about adding on longlife milk containers ? If chocolate milk cartons can get a deposit back, longlife is only a little different.But if more containers are to have a 10c deposit a better means of recouping the 10c needs to be found. On Saturday mornings there are often long queues of cars at the local Scout recycling depot, you can wait half an hour, and more deposits will only make this worse. We can't be bothered and drop our 10c containers at the local scout hall collection, but this option may not be widely availableIf we buy it in the supermarket (and I can hear them screaming) should there be a 10c refund place in the supermarket ? PS How sure can we be that the soft plastics that go to Coles/Woollies are actually recycled into something useful rather than ending up in landfill ?
11.	I think recycling wine bottles is an excellent idea to prevent so many going to landfill and to prevent bottles breaking and contaminating other waste.

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

12.	I think that the more that can be recycled the better. It has been long proven that a reimbursement is a good way to get people involved, expanding the base of containers eligible can only help more.
13.	I fully support making as many items as possible available under a deposit scheme. It will lead to better recycling practice and benefit the whole community. I would like to see a campaign and system set up that encourages people to leave items neatly in a box or container for those in our community who go around on bin days and forage for items they can return for a deposit. Win win for all.
14.	The CDS has been enormously successful since it was introduced in 1977. It needs to be expanded to include a wider range of containers, eg. wine bottles and other popular beverage containers. However, it is way beyond time to increase the deposit from 10c, to provide a greater incentive to recycle. Taking inflation into account, I strongly think that it should be increased to 30c. Yes the retailers will scream, but they did when the initial 10c was introduced - they'll accommodate the change and life will move on.
15.	Totally agree with the expanded deposits. The sooner the better. SA should continue to lead the way and care for our environment!
16.	Great idea the container deposit scheme should be expanded to as many items as possible. It is a proven and successful way to reduce litter and assist the environment
17.	Let's expand this successful scheme further to include as many items as possible to reduce wastage in the current bin system due to broken glass etc. Wine bottles, juice containers etc, have them all in the scheme to truly keep it a circulating system. And to reduce costs at local government level. Also, thought needs to be given about how to return the items for a refund if you don't have access to a car!
18.	We are definitely for a container deposit scheme to be expanded to include all glass bottles. We already recycle them directly to local recycling depot but if we received 10c from every bottle we took back we would be rewarded for doing right thing. We also would like to see milk / cordial bottles included. Every day we fish out about 15-20 bottles from our parks general waste bins cause guests don't think they go in recycling crates.
19.	I agree that it should increase from 10c but only to 20c. Think 30c would be too bigger increase in price.  In response to: The CDS has been enormously successful since it was introduced in 1977. It needs to be expanded to include a wider range of containers, eg. wine bottles and other popular beverage containers. However, it is way beyond time to increase the deposit from 10c, to provide a greater incentive to recycle. Taking inflation into account, I strongly think that it should be increased to 30c. Yes the retailers will scream, but they did when the initial 10c was introduced - they'll accommodate the change and life will move on.
20.	The current scheme was great, but there are so many anomalies, small kids drink containers 10c deposit, whereas a full litre wine bottle, orange juice etc nothing, that doesn't make sense. Personally, although a wine drinker, I believe that the deposit should be 50c, it will not deter purchasers. Denmark has had bottle and can depositors at most supermarkets for years (decades), you simply place your returned items on a conveyer belt, very much like an ATM, and then you receive a cash refund.
21.	This is an excellent idea and I fully support expanding the types of containers eligible for the scheme. Beyond what has been suggested, Glass jars containing cooking sauces (eg bolognese) should be included as well as drinks containers. I also agree with other suggestions to increase the deposit cost (eg 20c for standard size and 50c for larger containers, such as wine bottles).
22.	As a Tourist, I have used the supermarket recycling system in Denmark and found it very convenient & efficient for tourists too.

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

	<p>In response to: The current scheme was great, but there are so many anomalies, small kids drink containers 10c deposit, whereas a full litre wine bottle, orange juice etc nothing, that doesn't make sense. Personally, although a wine drinker, I believe that the deposit should be 50c, it will not deter purchasers.</p> <p>Denmark has had bottle and can depositors at most supermarkets for years (decades), you simply place your returned items on a conveyer belt, very much like an ATM, and then you receive a cash refund.</p>
23.	<p>I fully support the expansion of the scheme to ALL glass bottles &amp; jars, milk containers, fruit juice &amp; cordial bottles. It is likely that this would greatly reduce the quantity of items placed in rubbish bins (landfill) &amp; co-mingled recycling bins. I've recycled deposit items since the scheme was created and if more items had deposits I would recycle those too. I think that the current amount of 10c is a reasonable compromise amount to encourage recycling but not apply large additional costs to purchased items.</p>
24.	<p>Better to aim high. It needs to be a high enough amount that makes it worthwhile for people to think twice before simply discarding a container.</p> <p>In response to: I agree that it should increase from 10c but only to 20c. Think 30c would be too bigger increase in price.</p>
25.	<p>I support widening the scheme to all drink containers to encourage the recycling we need for a sustainable future. Increasing the refund &amp; increasing the options for receiving the refund will increase the uptake of the scheme.</p>
26.	<p>CDS has been very successful and SA has led the way nationally since 1977. SA should continue leading the green image nationally and expand the scheme to include ALL glass bottles &amp; jars, all plastic containers - milk, fruit juice, cordial, etc. Suppose increasing the deposit from 10c to 30c. This will provide a much greater incentive to recycle and keep items out of landfill. At 10c many people can't be bothered to separate, store and take to recycle centre. Improve the labelling information - promote the recycle process, promote that consumers are an essential link in SA's clean and green image, promote that recycling and the CDS scheme reduces landfill. Anything that promotes and supports reduction of landfill has to be a good thing. Keep glass and plastic out of the rubbish and yellow bins and help reduce the sizes of our waste management sites. To simplify the recycling and handling process all aluminum should be put together instead of having to separate beer cans from soft drink cans at the recycling centres. Great idea that Denmark has - fully support it and would pay the increase to make it happen.</p>
27.	<p>Strongly agree to including wine bottles but also to all types of containers that can be recycled: juice, milk, jars and cans. I cannot comment on the deposit price as I do not have the inside information but I trust that this will be set at the optimum amount.</p>
28.	<p>Thanks for the opportunity to comment, and congratulations to all involved in establishing this highly successful scheme and proud South Australian legacy. I fully support expanding the scheme to other types of containers, including as far as pasta sauce bottles which others have mentioned. Increasing the refund amount also seems like a highly sensible investment, that will increase buy-in from the community and reduce costs on local Councils.</p>
29.	<p>Wine bottles are a no-brainer to reducing glass in kerbside bins and perhaps sprit bottles to some extent. Whilst it might be "ideal" to remove all glass from kerbside systems, applying a deposit to jam jars or sauce bottles might have a perverse effect if industry opt for plastic alternatives. Removing light-weighted glass from kerbside bins is critical to achieving the best outcomes and returning glass into glass (not lower grade end uses). An increase in the deposit quantum is also critical to the continued success of resource recovery - and whilst this clearly should have been done 4-5 years ago, to avoid fraud from other jurisdictions it's timely for other jurisdictions for them to be put on notice for an increase in 2025 as an effective "third tier" change to the scheme once we have CDL on glass beverage containers. After all, the deposit on 1L glass coke bottles was actually 20 cents in 1977. Let's be honest with the community. forward thinking, and get on with what actually needs to be done. JL :D</p>

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

30.	If we want a true circular economy, all beverage containers should be in the scheme.
31.	I agree with....."Wine bottles are a no-brainer to reducing glass in kerbside bins and perhaps sprit bottles to some extent. Whilst it might be "ideal" to remove all glass from kerbside systems, applying a deposit to jam jars or sauce bottles might have a perverse effect if industry opt for plastic alternatives".
32.	The more we can recycle the better. Great idea to include wine bottles, spirit bottles and all drink containers including those purchased at supermarkets and used in the home. The more we can keep out of the yellow bin the better. Adding jam jars and sauce jars/bottles would contribute to recycling further. Raising the deposit paid will encourage people to think twice before discarding their container into the bin. Its a YES from me.
33.	Wine, spirit and other glass bottles in. Absolute no brainer and a huge economic and social and environmental benefit for the state.  Additionally, all plastic containers should be mandated to be made from Polyethylene terephthalate (PET) or High-Density Polyethylene (HDPE). Yakult containers are polystyrene (PS) and Cottees Cordial are Polyvinyl chloride (PVC), both of which (aren't or are rarely) recycled through either the CDS or kerbside bin system. PET and HDPE have high value and are highly recyclable.
34.	Along with everyone else, agree that the scheme should be expanded as much as possible to other containers. In terms of preferencing, I would think the most important containers to add in terms of waste volume would be wine bottles and plastic plain milk bottles (all sizes, but especially 2L or more). But add them all in! :)
35.	Recycling makes common sense. The more that we can recycle and reuse, the better. Please expand the bottle collection to as many items as possible and feasible.
36.	This makes a lot of sense and should have been implemented years ago. Strongly support this!
37.	Yes!! A no brainer really...more jobs, more money in our pockets, less going to landfill being better for our environment!!
38.	Great idea to include wine bottles and other containers, opportunities for clubs, scout's etc to raise more funds to help operating
39.	Absolutely!! The more we can recycle the better. Great idea to include wine spirit bottles, 2L milk, juice bottles and all beverage bottles also. The more we can keep out of the yellow bin the better. This should have happened years ago but so stoked it's on the cards now - well done! Its a definite yes from me.
40.	I would support the inclusion of wine bottles for the 10cent refund to assist with the second use of the glass
41.	Fantastic idea. This should have been done years ago. The more we can recycle the better. Less into landfill. Definitely gets my family's vote.
42.	Yes, I agree, our family would participate in this program.
43.	I strongly agree with extending the reach of container deposits but please think through a "no cap no deposit" policy. Plastic bottle caps are one of the most single use plastic items littered at beaches, rivers, creeks and reserves. Eastern States deposit schemes ask for the bottles to be crushed and then replace the cap. In SA we are instructed to remove the caps. Putting a value on the cap will reduce this issue. Thank you.
44.	With so many prestigious wine regions, one which is the most sustainable in Australia (McLaren Vale) we should most definitely be recycling wine bottles! The more incentive, the better

## SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

45.	Include wine bottles in container deposit
46.	I support inclusion of wine spirit bottles, 2L milk, juice bottles and all beverage bottles.
47.	I support the inclusion of all wine, spirit, juice, milk containers including all plastic caps, the caps need to be included and have a small value to them would help reduce them being littered in the environment
48.	I support inclusion of wine spirit bottles, 2L milk, juice bottles and all beverage bottles.
49.	Definitely support the inclusion of of all wine, spirit, juice, milk containers including all plastic caps. Anything that reduces waste and landfill. Pleased that positive action is being taken in this area.
50.	100% support the expansion of recycling motivators.
51.	<p>The proposed payment of 10 cents per wine bottle returned, via the SA Container Deposit Scheme, is an excellent concept! This state, South Australia, has run the Container Deposit Scheme since 1977, turning over 44, 000 tonnes of waste soft drink bottles and cans for recycling each year.</p> <p>The Scheme has provided pocket money for diligent children and has been a major fund-raiser for the Scouts and various sporting clubs for decades. Recycling centres already exist all around this state to handle returned bottles and cans, with the further handling of wine bottles to be an extension of this well-oiled scheme. Our Container Deposit Scheme has been the envy of other states and adding this extra component will only enhance this further.</p> <p>Introducing this proposed addition should be a 'no-brainer' for the SA Government, bringing further funds and accolades, while at the same time further reducing glass litter from our urban, suburban and rural environments.</p>
52.	Yes to including wine and plastic juice and milk bottles in the container deposit scheme. My son returns bottles to the scout recycling centre for pocket money.
53.	Yes, yes. An excellent idea that will meet a major recycling need. I am delighted action is being finally considered.
54.	It's a great idea and what good news that it's finally up for consideration. Bring it on.
55.	This is a fantastic proposal, strongly in support of anything to reduce landfill and litter.
56.	If wine bottles were to be included in the CDS, it would have a profound impact on wine businesses across South Australia and impose significant costs and 'red tape' on an industry already reeling from the impact of Covid 19 and International market tensions. The CDS is fundamentally a litter prevention program and glass wine bottles make up less than 0.05% of litter items in SA. This does little to support its core purpose.
57.	<p>I want glass containers for the following to be included in the CDS so the manufacturing materials can be re-used and broken glass doesn't pollute the other recyclables in the bins: all glass wine, liquor, cordial, juice bottles. The costs can be added to our purchase price.</p> <p>In response to: If wine bottles were to be included in the CDS, it would have a profound impact on wine businesses across South Australia and impose significant costs and 'red tape' on an industry already reeling from the impact of Covid 19 and International market tensions. The CDS is fundamentally a litter prevention program and glass wine bottles make up less than 0.05% of litter items in SA. This does little to support its core purpose.</p>
58.	I support a 10 cent deposit on all glass wine and spirit bottles. Also, any drink bottles under 2 litres. Adding 10c deposit to 2 litre milk and juice will increase prices and affect financially

## SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

	struggling families. We don't want to prevent them buying nutritional drinks for themselves and their families.
59.	What people aren't aware is that not only are all the costs pushed back on to the producer, in excess of 10c per container regardless of whether or not it get's recycled, but the producer is forced to pay an exorbitant fee to have every separate produce label "approved". Which is fine if you're a medium to big producer, but for small producers that's a whole packet of money. That this is not made clearer to the consumer shows what a scam the whole thing is. So, yeah, good idea, but how about small producers aren't PENALISED for this good idea.
60.	ShelleyI fully support the extension of the CDS primarily to reduce landfill and improve recycling. Containers which are commonly used but not currently included should definitely be included such as wine bottles and milk bottles. To prevent causing an unfair cost impost on small producers perhaps there should be volume thresholds so that they are exempt from the cost. Ultimately the consumer should pay but the scheme should be as efficient as possible to reduce the costs.
61.	Hi thereI would like to say I strongly support the Objectives of the CDS. I think it's a great policy helping reduce litter and diverting waste from landfill. I support expanding the CDS to include as many containers and bottles as possible, I think these will help meet our goals in the National Waste Action Plan and the State Waste Strategy.I really take pride in SA being a leader in this area when it comes to resource recovery and moving away from single use items and moving to a more circular economy, I hope we can continue to provide exceptional product stewardship.I think it's also great to hear there is a need to make depots more accessible helping the community participate in the scheme.If there is anything that is missing, a review into what impact raising the refund from 5 to 10 cents has been and looking at weather that increase should be tied to inflation
62.	I believe the CDS is a brilliant scheme. It should be extended to other products such as peanut butter jars, jam jars etc. However, the cost to the producer is too significant for them to just find this money out of nowhere. The government should match any cost that the producer pays. E.g the producer pays 5c and so does the government. This opens up the scheme to new producers and encourages more recycling from the consumer. In summary yes its a good idea but more support should be offered from the government to producers to make it more efficient and effective.
63.	As i pick up a lot off rubbish on the Mallee Highway i think Milk ,Wine bottles ,Coffee Cup and fast food ( KFC McDonalds, On the Run Hungry Jacks )containers shop be hit with the 10 cent fee for this rubbish. It now is the biggest littering on our country roads.
64.	As an SA based grape grower, if the CDS was extended into the wine industry, it would be great to see a joined up approach where the revenue raised directly went into a fund that supports the industry moving to carbon neutrality (and is transparently tracked for everyone to see the impact)
65.	I think that it would be good to consider an increase in the price of the refund scheme as it has been the same price for 30 years. I do not save bottles myself and just put them in recycling bin as I do not think it is worth it. How many more people are doing the same?
66.	If Believe that the deposits on wine bottles could work provided the deposit is paid by the winery once the bottle is sold. Given the long lead time of wine producion it would be a costly exersize to have to pay the deposit amount at the time of production
67.	I support including wine & spirit bottles as part of the SA Container Deposit Scheme (CDS). I was dismayed passing a recycling collection truck recently and to hear the smashing of bottles thereby contaminating all other recycling materials collected. We simply must reduce our waste to landfill and incentives such as the CDS work.
68.	The CDS should be extended to include all recyclable bottles - glass, tetra and plastic. It's beyond time in my opinion. Wine and spirit bottles, milk bottles (include all sizes, not just on flavoured 375/600 ml)

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

69.	I would like to see an extension of the CDS however I think if the scene is to truly reflect environmental sustainability principles then it should be expanded to include containers that don't have an alternative re-use, or that society couldn't possibly re-use them in the quantities that we manufacture them in. Yoghurt tubs and cream containers with firm lids can be used again but I don't have the need for that many containers with a poor air seal. Vs I can use metal lid jars again and again. I would like to see reverse CDS for liquid washing detergent bottles with charges paid by those companies who don't provide readily accessible refill stations to contribute to societies ability to choose to reduce plastic manufacturing.
70.	Just a couple of things that I think need to be addressed. 1 wine bottles should be included as well as some waxed paper containers. 2 fast food outlets should pay more as you in see the litter everywhere with their names all across
71.	I think we should have a bin each for plastic, metal, glass, paper and cardboard. These can be collect on yellow bins alternating weeks
72.	I'd like to see the CDS 10c amount doubled to 20c. And the scheme expanded to include other items, such as fast food boxes, aluminium takeaway food containers and wine bottles.
73.	It's the first time I've made a comment here and it's a laborious process. Why, when asking busy people for their opinion, is the plan so longwinded? There are 92 pages of glossy photos, repetition and motherhood statements. Even the Executive Summary is two pages but doesn't summarise what's involved in practical terms. We don't need to be convinced of the benefits The nuts and bolts of this proposal could be explained in two or three paragraphs and reports of it on news services manage to do this.
74.	I strongly support increasing the CDS to include as many bottles cans and items that can be included. It's a great policy reducing litter and keeping waste from landfill, and giving those that choose to collect the discarded items a source of income as well. It's great that SA is the State that wants to keep our Country's landscape clear of litter, and it's a pity the other States have not realised the value of the CDS scheme and implemented a similar one in their Sate. I believe we need to make depots more accessible and in so doing encouraging the community participate in the scheme.
75.	I strongly support increasing the CDS to includes as many bottles and cand as possible, but particularly alcohol containers. The 10 cents deposit could be doubled to facilitate an increase in overall recycling.
76.	I agree the system needs to be expanded. There is no reason, other than the cost and making facilities available, why all glass, plastics and metals can not be recycled. Once offered for wholesale or retail sale (whichever occurs first) the deposit should be paid and can then be passed on to the final consumer. Labelling also needs to be national. Some products produced in other states say to bin a product even though it is recyclable here.
77.	I agree with expanding the scheme and would suggest including Wine bottles and plastic juice drink bottles. 10 cents is a good payment, so no need to make it 20 cents at this stage.  In response to: I strongly support increasing the CDS to includes as many bottles and cand as possible, but particularly alcohol containers. The 10 cents deposit could be doubled to facilitate an increase in overall recycling.
78.	In my area a large excellent depot is just 1 km away from our house. Extra depots may be needed in some areas. We are lucky to have one so close to us. Staff in our depot are very friendly and courteous and honest.  In response to: I strongly support increasing the CDS to include as many bottles cans and items that can be included. <div>It's a great policy reducing litter and keeping waste from landfill, and giving those that choose to collect the discarded items a source of income as well. </div><div>It's great that SA is the State that wants to keep our Country's landscape clear of litter, and it's a pity the other States have not realised the value of the CDS scheme and implemented a similar one in

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

	<p>their Sate. I believe we need to make depots more accessible and in so doing encouraging the community participate in the scheme.</p>
79.	<p>20 cents add a lot of cost to a box of 30 aluminium drink cans etc. I feel 10 cents is OK at this time. Fast food containers need to be washed out and put into the yellow council recycling bin. No need to duplicate that service imho.</p> <p>In response to: I'd like to see the CDS 10c amount doubled to 20c. And the scheme expanded to include other items, such as fast food boxes, aluminium takeaway food containers and wine bottles.</p>
80.	<p>not everyone wants to re-fill detergents etc at the Supermarket. It could become very messy and dangerous when liquid is spilled.</p> <p>In response to: I would like to see an extension of the CDS however I think if the scene is to truly reflect environmental sustainability principles then it should be expanded to include containers that don't have an alternative re-use, or that society couldn't possibly re-use them in the quantities that we manufacture them in. Yoghurt tubs and cream containers with firm lids can be used again but I don't have the need for that many containers with a poor air seal. Vs I can use metal lid jars again and again. I would like to see reverse CDS for liquid washing detergent bottles with charges paid by those companies who don't provide readily accessible refill stations to contribute to societies ability to choose to reduce plastic manufacturing.</p>
81.	<p>Wineries can pay the deposit fee at the time wine is shipped to customers including retailers and wholesalers. Then time to mature wine in storage would not come into the equation.</p> <p>In response to: If Believe that the deposits on wine bottles could work provided the deposit is paid by the winery once the bottle is sold. Given the long lead time of wine production it would be a costly exersize to have to pay the deposit amount at the time of production</p>
82.	<p>It increased from 5 cents per item to 10 cents per item in the last few years. At this time 10 cents per can, on a 30 can box, adds \$ 3 to the carton with 30 cans cost to customers. I feel that is enough at this time. Keep cleaned items in plastic bags and then take to depot when you have 4 to 8 bags full, which gives you a nice amount of money in return for being a good recycler :-) Don't forget to remove plastic tops of bottles. The depot staff really appreciate that as it allows faster processing. :-)</p> <p>In response to: I think that it would be good to consider an increase in the price of the refund scheme as it has been the same price for 30 years. I do not save bottles myself and just put them in recycling bin as I do not think it is worth it. How many more people are doing the same?</p>
83.	<p>Consumers are not on this earth to pay , for everything. Producers can do their bit to contribute by participation happily in the CDS. I like a world where everyone does their bit including Producers, Manufacturers, wholesale and retail outlets and finally consumers. Suggesting to shift the burden to just on part of that chain is unfair in my opinion. We ALL have to do our bit :-)</p> <p>In response to: As an SA based grape grower, if the CDS was extended into the wine industry, it would be great to see a joined up approach where the revenue raised directly went into a fund that supports the industry moving to carbon neutrality (and is transparently tracked for everyone to see the impact)</p>
84.	<p>Re-fill detergents is already available at many supermarkets and health food stores and is being used successfully. I'm not saying remove the ability to purchase pre-filled.Perhaps you could use your comments to promote idea generation rather than knocking everyone down when they make suggestions.</p> <p>In response to: not everyone wants to re-fill detergents etc at the Supermarket. It could become very messy and dangerous when liquid is spilled.</p>
85.	<p>Yes</p>

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

	In response to: I would like to see an extension of the CDS however I think if the scene is to truly reflect environmental sustainability principles then it should be expanded to include containers that don't have an alternative re-use, or that society couldn't possibly re-use them in the quantities that we manufacture them in. Yoghurt tubs and cream containers with firm lids can be used again but I don't have the need for that many containers with a poor air seal. Vs I can use metal lid jars again and again. I would like to see reverse CDS for liquid washing detergent bottles with charges paid by those companies who don't provide readily accessible refill stations to contribute to societies ability to choose to reduce plastic manufacturing.
86.	I support the proposal in include wine/spirit bottles and milk/juice plastic containers in the CDS.I would like to see the refund stay at 10 cents.
87.	agree In response to: I support the proposal in include wine/spirit bottles and milk/juice plastic containers in the CDS.<div>I would like to see the refund stay at 10 cents.</div>
88.	I believe including the following in CDS would be very beneficial; wine/champagne bottles, fruit juice bottles, milk bottles (eg 1,2,3L).
89.	I support the proposal to include wine and spirit bottles, and milk / juice containers in the CDS.
90.	I have always wondered when more beverage containers would be included as the current system is pretty arbitrary - some juice and flavoured milk in small containers is included while the same drinks in larger containers aren't. Where is the logic in that?! It makes senses and cents to include more types of container especially high quality glass liquor and wine bottles. The more included in the scheme the easier it makes it for people to get into the habit of recycling their containers and increasing participation in this.
91.	Many tubs and dip containers can already go into normal recycling bins. They surely don't need to be in the CDS, do they? The original aim of the scheme was I think to reduce waste in the environment as, when people routinely drank from bottles and cans outside the home, they often used to just throw them away on the street so the deposit system gave an incentive to return bottles and cans for cash. Your idea is a good one but would widen the intent of the scheme. I confess I haven't read the first document about the aims of the scheme, only the one about expanding the containers so I don't know if the sort of aims you suggest are being considered but I think there are currently 2 ways of recycling - the standard recycling bin and the separate CDS.  In response to: I would like to see an extension of the CDS however I think if the scene is to truly reflect environmental sustainability principles then it should be expanded to include containers that don't have an alternative re-use, or that society couldn't possibly re-use them in the quantities that we manufacture them in. Yoghurt tubs and cream containers with firm lids can be used again but I don't have the need for that many containers with a poor air seal. Vs I can use metal lid jars again and again. I would like to see reverse CDS for liquid washing detergent bottles with charges paid by those companies who don't provide readily accessible refill stations to contribute to societies ability to choose to reduce plastic manufacturing.
92.	I can't understand why wine and spirits bottles are except from a deposit fee.Fix that..Also milk containers regardless of size.Maybe we need to tighten up the blue recycling bin rules. Does all the blue bin stuff get recycled.? Correctly.
93.	I'm a firm believer in the CDS and hope fervently that it will be expanded to included wine bottles and all glass and plastic containers. What I don't want to see is a move to machine based only recycling as happens now in NSW where it is a disaster! Our daughter lives in NSW and refuses to waste her time recycling because the machines are always full and won't accept any more bottles.Our current model of recycling centres works extremely well - by all means supplement them with machines but do not undermine the current process.
94.	I think it is fantastic that SA is staying ahead of other states and looking at improving. In Sweden there are recycling stations at all supermarkets that give a cash refund for plastic bottles and cans.

## SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

	A similar system could be adopted whilst maintaining the recycling stations. I think that SA can go a step further and give refunds for all plastic containers like shampoo, dish washing liquid etc. as others have said wine and spirit bottles should also have a refund of at least 10c if not 20c as they are twice the size.
95.	The new scheme should include the management of bottle lids. Lids are the 2nd most identifiable single use plastic item collected by volunteers along our beaches, creeks, rivers and reserves. The Adopt ASpot Scheme believe the Scheme should include all or some of the following amendments. 1. Create media campaign to educate consumers to crush the bottle and replace the lids as is the case in the eastern states. 2. Think through a "No lid No deposit" approach 3. Increase the deposit amount to 15 cents for bottles that have lids attached. 4. Have bottles with detachable lids put onto the Single Use Plastic Ban list where possible
96.	Absolutely agree that glass wine bottles and the like should have deposits to encourage more recycling and reuse of this material.
97.	To encourage more recycling and less containers going to landfill I would definitely like to see more types of containers included including glass liquor, wine bottles and even some plastics. The more included in the scheme the easier and better it makes it for the community to get behind it and into the habit of recycling their containers. The deposit has been 10 cents for 20 years and perhaps it's time to double the deposit to 20 cents or at the very least make the wine and liquor bottles refunds 20 cents to make it worth people recycling these bigger items
98.	Soft Plastics being collected by the Supermarkets - are they being disposed of effectively and being reused.
99.	This is a fantastic step in the right direction.  It is vital that we take glass out of the kerbside recycling bins as they break and reduce the quality of all other recyclables.  The stats speak for themselves - 95% of glass containers collected as part of CDS are recycled into new bottles and a measly 11% from kerbside is recycled back into glass.  Why not introduce a deposit for all glass as part of the proposed changes to boost the value of recyclables overnight?
100.	The addition of RVMs or similar at supermarket points would make me return my deposit containers, which I currently add to kerbside recycling for the convenience. This is because I can make the drop off in line with my existing routine, much like the way I return soft plastics when grocery shopping.
101.	It would be great to add the 10c refund to All milk bottles, including flavoured milks. Include all cream containers. Also add it to All fruit juice containers, both plastic and tinned. Help all supermarkets have recycle bins, like Redcycle areas. Encourage supermarkets to use composite trays for meats and fruit and veg. Or add 10c deposit to trays. Or what about, shock horror, let shoppers use their own reusable containers to purchase meats from supermarkets, even butchers.
102.	Any increase in the scheme would be beneficial eg wine bottles, drink cartons. Also I know it's a separate scheme but making it easier to recycle soft plastic eg through kerbside bins would be great.
103.	All beverage containers including wine and plain milk. After 13 years time that the deposit was increased to 20c. Have return machines at supermarkets and other suitable places such as beach side carparks but also retain the present scheme. Those that use the current scheme will, in the main, continue to do so; people that don't bother at the moment may be encouraged by the ease of the vending machines.
104.	Rather than including wine bottles in the CDS scheme which would bring about a huge cost to producers and the supply chain, thus negating the community benefit for 0.5% of the total amount of containers, it should remain as a voluntary scheme with more effort put into education of the

SUBMISSIONS MADE TO THE EPA BY INDIVIDUALS VIA THE YOUR SAY PLATFORM

	<p>public about where things can be recycled. For example, currently wine bottles as well as cardboard and various other bottles are collected by the scouts and separated when you return them with the 10c CDS containers. Most supermarkets now have a soft plastic recycling location. There are plenty of alternatives to implementing a system that has the potential to cost jobs for very little payback.</p>
105.	<p>All beverage containers should be included in the scheme, make it easier and simpler for everyone to do the right thing.</p>
106.	<p>Extending the CDS to wine bottles would present a potential economic risk to the South Australian wine industry, including investment, direct employment, which could have dramatic flow on impacts throughout the supply chain, with significant direct impacts on wine businesses.</p>
107.	<p>Re the Recycling Deposit Scheme, I am very much in favour of expanding the existing scheme to include many more items, including all milk containers, fruit and vegetable juice containers and any liquor containers, regardless of the materials these containers are housed in. I also don't think there should be limits on the size of the containers. It is imperative that we recycle as much as humanly possible, considering the huge impact it has on the environment. We need to be responsible for those who follow us NOW, not in years to come when it is too late to reverse our wrongdoings. More recycling would create many more jobs in an environmentally beneficial area rather than in continually producing new products, a practice which is inherently unsustainable. I am always concerned when I hear glass being broken as it is loaded in kerbside collection as it so often devalues other materials such as paper and cardboard. Widening the range of the glass bottle deposit scheme in particular would make a great difference to this problem. I also am very much in favour of increasing the deposit amount to twenty cents as I think it would be much more effective in encouraging people to recycle more appropriately. I strongly believe that there needs to be more consistency in what is accepted for recycling and what is not. Our future depends on it.</p>
